Mosquito Tips And Traps Take A Safer Bite Out Of

Mosquito Tips And Traps Take A Safer Bite Out Of Bug SeasonBug spray should repel insects, not your family-but some of the chemicals used in mosquito repellent can sometimes do exactly that. A recent study shows 60 percent of Americans shy away from any insect repellent, even when the mosquito-borne West Nile virus may be a serious threat.Add to that a Centers for Disease Control Report stating that spraying ***custom ADU builders*** pesticides is actually the least effective mosquito control technique and you may be scratching your head, wondering just how to keep biting bugs at bay. The advice from scientists: Go natural. There are a variety of steps people can take to reduce the number of mosquitoes in their yards without using bug spray. Try these tips: Water, Water Everywhere?Take a walk around your yard or outdoor space and look for standing water. Mosquitoes lay their eggs in still puddles. Eliminating those puddles can reduce the number of bugs in your yard. Change the water in birdbaths and pet dishes regularly and be sure to dump any water that's collected in pots or other containers around the yard. It's also smart to drill holes in the bottom of tire swings. Nowhere to HideKeeping your yard well-trimmed can cut down on the places mosquitoes have to hide from predators, such as birds or other bugs. Fewer hiding spots could mean fewer mosquitoes (and fewer mosquito bites). Virtually Eliminating Mosquitoes A device called the Mosquito Magnet traps and kills mosquitoes by making itself irresistible to the biting bugs. It emits a plume of carbon dioxide, heat and moisture that mimics human breath, and it has specialized attractants to lure mosquitoes to the trap. As the mosquito approaches the trap, hoping for a human, it is quietly vacuumed into a net, where it dehydrates and dies.Permanent ResultsThe traps are considered long-term solutions. They've been used by hotels and restaurants to make "mosquito walls" that keep guests comfortable and they've been scientifically proven effective. In fact, the trap's manufacturer says that they will virtually eliminate the mosquito population in a yard after weeks of use. Get SpecificThe traps are designed to only attract biting insects such as no-see-ums, biting midges, black flies, sand flies and, of course, mosquitoes. They don't catch the beneficial insects such as bumblebees and butterflies. In addition, one specialized attractant is targeted directly at hard-to-catch mosquito species such as the Asian Tiger mosquito, which has been shown to carry West Nile virus. This selective targeting is one important way that the traps differ from bug zappers, which are ineffective in reducing mosquito biting rates and kill many harmless or beneficial insects, as well.

Reliable Standard ADU Builders provides professional ADU design and construction services, helping homeowners create functional, comfortable, and valuable additional living spaces. From planning and permitting to construction, the team delivers practical solutions tailored to each property.

Reliable Standard ADU Builders
Address: 11315 Rancho Bernardo Rd, San Diego, CA 92127, United States
