These skins are designated a "worth" based on the dominating market price on third-party trading websites.

Once the skins are contributed to the platform's balance, the user can place bets on a digital wheel. The wheel is usually divided into three primary classifications:

1. **Red:** Usually pays 2:1.
2. **Black:** Usually pays 2:1.
3. **Green (The House Edge):** Usually pays 14:1 or higher.

The presence of the green sector is the "house edge." Without it, the game would be a coin flip. By landing on green, your house makes sure that, statistically, it will constantly triumph over a long adequate timeframe.

**2. How do I know if a site is "Provably Fair"?**A provably reasonable site offers a "server seed" and a "customer seed." Before the spin, you are offered a hashed variation of the server seed.
