Each effective action increases the multiplier, but striking a surprise trap resets the game and loses the wager.
2. **Puzzle & Logic Towers:** Strategy-based games (like the timeless *Tower of Hanoi*) where players must move disks or obstructs according to specific rules.

Requirement Grid Layouts

- **Easy Mode:** 3 columns per row (higher possibility of striking a safe tile, lower multipliers).
- **Medium Mode:** 4 columns per row (balanced threat and reward).
- **Difficult Mode:** 2 columns per row (high threat, enormous multipliers).

Gamers begin at the bottom row and must click one tile. If the tile is safe, they advance to the next row, and their potential payment multiplier increases. They can choose to "cash out" at any time or continue climbing for a higher payment. If they struck a trap, the game ends right away.

- Set a rigorous budget plan before beginning a session.
- Identify a target multiplier and squander instantly as soon as reached.
- Avoid chasing losses by all of a sudden leaping to "Hard" mode after a streak of bad luck.

3. Progressive Scaling (The Martingale Approach - With Caution)

Some risk-tolerant players utilize progression wagering systems, doubling their wager after a loss to recuperate previous funds. However, players must work out extreme caution with this method, as striking a streak of early losses can rapidly deplete a bankroll.

4. Profiting from "Easy" Mode

For beginners or those searching for longer play sessions, sticking to the 3-column or 4-column variations provides a steadier climb. Although the private multipliers are smaller, the frequency of effective ascents is significantly higher.
