At its core, Limbo is a simplified, highly distilled version of the traditional gambling establishment crash game. Established at first by innovative crypto-native gambling establishments like Stake, variations of Limbo can now be found throughout nearly all major blockchain-based gambling platforms.

The premise is stealthily basic:

1. The player places a wager in their picked cryptocurrency (Bitcoin, Ethereum, GBPT, and so on).
2. The player sets a **Target Multiplier** (e.g., 2x, 10x, 100x, and even 1,000,000 x).
3. The game produces a random multiplier result.
4. If the generated multiplier is **equivalent to or greater** than the target multiplier, the gamer wins their bet multiplied by their target. If it falls below, the bet is lost.

Unlike traditional slots where symbols must line up in specific methods, Limbo boils the entire gambling experience down to a single concern: *Can you predict how high the multiplier will go?*
