The goal for the gamer is easy in theory, yet agonizing in practice: place a stake (using real money, cryptocurrency, or CSGO skins), watch the multiplier increase, and hit the "Cash Out" button before the multiplier crashes. If the player squanders in time, they win their stake multiplied by the present number. If the crash takes place before they cash out, they lose their stake totally.

The Basic Mechanics of Crash

1. **The Betting Phase:** Players have a brief window (typically 5 to 10 seconds) to put their bets and optionally set an "auto-cashout" multiplier.
2. **The Ascent:** Once the betting stage closes, the round starts. A chart or an animated item (frequently a rocket, jet, or terrorist character) takes off, and the multiplier ticks upward in real-time.
3. **The Crash:** The round ends abruptly when the system activates a crash. This can occur anywhere-- even immediately at 1.00 x (often described as an "instant bust"), or it can skyrocket previous 100x, 500x, or greater.
