Unlike traditional slots where the outcome is completely predetermined by a spinning animation beyond the player's control, the Tower game puts a semblance of choice in the player's hands. At any provided tier, the player can select to squander their collected payouts or press their luck by taking another action up the tower.

Core Mechanics at a Glance

- **The Grid:** The game is normally presented as a pyramid or vertical grid composed of numerous rows (tiers) and columns.
- **The Choice:** In each row, the player must pick one (or more) tiles.
- **The Outcome:** Uncovering a safe tile increases the multiplier and enables progression to the next row. Uncovering a hidden risk or trap ends the round, leading to the loss of the present bet and any accrued jackpots.

3. **Make the First Move:** Click on among the tiles in the bottom row.
4. **Ascend or Cash Out:**

 - If a trap is revealed, the round ends right away, and the stake is surrendered.
5. **Arrive:** If a gamer successfully navigates all rows without striking a trap, they hit the optimum multiplier of the tower, and the game immediately pays the leading reward.
