If the gamer cashes out in time, they win their stake multiplied by the present number. If the crash occurs before they squander, they lose their stake entirely.

The Basic Mechanics of Crash

1. **The Betting Phase:** Players have a quick window (typically 5 to 10 seconds) to position their bets and additionally set an "auto-cashout" multiplier.
2. **The Ascent:** Once the wagering stage closes, the round starts. A graph or an animated item (often a rocket, jet, or terrorist character) removes, and the multiplier ticks upward in real-time.
3. **The Crash:** The round ends quickly when the system sets off a crash. This can take place anywhere-- even instantly at 1.00 x (frequently described as an "instant bust"), or it can skyrocket past 100x, 500x, or greater.

 - *Method:* Doubling the bet size after every loss in an attempt to recover previous losses with a single win.

- *Threat:* Highly hazardous due to table limitations, exponential bankroll depletion, and the possibility of consecutive early crashes.
