- 1. Deposit Skins:** The player logs into a betting website utilizing their Steam account and transfers digital products from their Steam stock to the platform's trade bot.
- 2. Transform to Balance:** The products are valued based upon prevailing Steam Market or third-party marketplace rates and credited to the gamer's account.

Typical Betting Systems

- **The Martingale System:**
 - *How it works:* Players double their bet after every loss. When they eventually win, the profit covers all previous losses plus a profit equal to the original base bet.
 - *Risk:* Highly dangerous. Hitting a long losing streak can quickly drain a player's entire balance or run into the site's maximum bet limitations.
- **The Paroli System (Reverse Martingale):**
 - *How it works:* Players double their bet after a win, intending to take advantage of winning streaks, and go back to the base bet after a loss.
 - *Threat:* Preserves bankroll better throughout losing streaks, but relies greatly on catching a hot streak to see significant gains.
- **The D'Alembert System:**
 - *How it works:* A more conservative approach where players increase their bet by one system after a loss and decrease it by one system after a win.
 - *Risk:* Slower progression, but still susceptible to extended downturns.
