

System X ceramic coating can last up to a decade with proper application and maintenance, offering Boise vehicle owners significantly longer protection than traditional wax, which typically lasts only weeks. This extended longevity reflects the molecular level bond System X coating forms with a vehicle's clear coat, a bond quality dependent on proper surface **vehicle PPF and ceramic** preparation and certified application technique. Gemstar Detailing's System X certification ensures Boise customers receive coating applied correctly to achieve this maximum potential lifespan rather than a shorter, disappointing result.
