Upon opening, the system randomly creates a single product from a predefined loot table.

While some games utilize these containers to dispense functional equipment, the majority of modern titles restrict case rewards strictly to **cosmetics**. These items-- varying from weapon finishes and character skins to emotes and stickers-- do not change gameplay mechanics, but they heavily affect gamer status, self-expression, and digital identity.

Rarity Tier Approximate Drop Rate Economic Value Description **Consumer/ Common** ~ 79.9% Very Low Standard products that flood the market; frequently used in trade-up agreements. **Mil-Spec/ Uncommon** ~ 15.99% Low Somewhat more comprehensive designs, typical results for basic openings. **Restricted/ Rare** ~ 3.2% Moderate Significantly much better aesthetics; begins to hold some individual market price. **Categorized/ Mythical** ~

0.64% High Extremely detailed skins that are searched for by collectors. **Covert/ Legendary** ~ 0.13% Very High The top-tier standard products; visually striking and expensive. **Special/ Exceedingly Rare** ~ 0.26% (Combined) Extremely High Knives, gloves, or ultra-rare character models.
