

Major appliances require specific preparation before they can be safely moved, and skipping proper steps can lead to water damage, electrical issues, or damage to the appliance itself. Manifest Moving Columbus has handled countless appliance moves and follows a careful process to avoid these common problems.

A Moving Company in Columbus OH experienced with large appliances understands the weight, fragility, and specific disconnection steps required for washers, dryers, and refrigerators.

Preparing the Washing Machine

Manifest Moving Company recommends running a final cycle to clear out any remaining water before disconnecting hoses. Draining and securing the hoses prevents leaks during transport, and many washers also require shipping bolts to protect the internal drum from damage while moving.

Checking the owner's manual for specific transport instructions helps avoid skipping a manufacturer-recommended step unique to certain models.

Labor Only Moving Services for Heavy Appliance Handling

For customers who need experienced help lifting and maneuvering heavy appliances, Manifest Moving Columbus offers [labor only moving](#) services. Trained movers handle the physical demands of moving washers, dryers, and refrigerators safely, reducing the risk of injury or damage to the appliance and the home.

This service works well for customers who have their own truck but want professional hands for the heaviest and most awkward items in the move.

Disconnecting the Dryer Safely

Dryers require disconnecting from either a gas line or electrical outlet, depending on the model. Columbus OH Movers recommend turning off the gas supply valve completely before disconnecting a gas dryer, and consulting a professional if there is any uncertainty about handling gas connections safely.

Cleaning out the lint trap and vent hose before the move also reduces mess and prevents lint from spilling out during transport.

Emptying and Securing the Refrigerator

Refrigerators need to be fully emptied and defrosted at least a day before the move to avoid water leaking during transport. Manifest Movers in Columbus OH recommend leaving the refrigerator door slightly open for a few hours after defrosting to allow it to dry completely.

Securing shelves and **local Manifest moving Columbus** drawers inside the fridge with tape prevents them from sliding around and breaking during the move.

Loading Appliances Safely in the Truck

Large appliances should be loaded upright whenever possible, since laying certain appliances on their side can cause damage to internal components. Manifest Moving Columbus positions these items carefully within the truck, using straps to keep them stable during transport.

This careful loading helps appliances arrive at the new home ready to reconnect without unnecessary repairs or troubleshooting.

Moving major appliances safely takes preparation and the right technique. For experienced help with your next appliance move, visit [Manifest Moving](#).
