What is a Towers Slot?

Unlike traditional spinning-reel slots where wins are determined completely by matching signs throughout paylines, a Towers slot typically makes use of a grid-based or ascending path mechanic. Influenced by timeless game games (and the popular casino mini-game format), players begin at the bottom of a structure and work their method up row by row.

On each level, the gamer should choose several tiles. Behind these tiles lie either multipliers, advancing signs, or concealed traps (such as skulls, bombs, or monsters). Selecting a safe tile increases the overall payment multiplier and allows the gamer to advance to the next tier. Selecting a trap ends the round and forfeits any built up payouts for that climb.

Core Characteristics of Tower Games:

- **Vertical Progression:** Gameplay moves upward rather than horizontally throughout reels.
- **Cash-Out Mechanics:** Players can typically pick to "cash out" their winnings at the end of any effective level instead of risking it on the next tier.
- **Adjustable Volatility:** Many tower games enable players to select their difficulty level, directly affecting the risk-to-reward ratio.
