

Why a Cannabis Flower 112g Bundle Makes Sense for Consistent Supply

When I first started buying cannabis flower in larger quantities, I was mostly trying to save myself from weekly trips to the store. The convenience of having a steady supply on hand was obvious, but I quickly learned that not all bulk options are created equal. The difference often comes down to how the flower is stored, how fresh it stays over time, and whether the selection offers enough variety to keep things interesting. That is where the idea of a cannabis flower 112g bundle really starts to shine, especially when you are sourcing from a place that understands the importance of quality and curation.

I have spent years working with different producers and retailers across Canada, and I have seen how the market has shifted toward larger format purchases. The old thinking was that buying in bulk meant sacrificing quality or ending up with a lot of the same strain. But that has changed. Nowadays, a well-put-together 112g order can give you access to a rotating lineup of top-tier flower from some of the best names in the industry. You just have to know what to look for and how to store it properly.

Why 112 Grams Hits a Sweet Spot

There is something about the 112-gram mark that feels intentional. It is not so large that you feel buried under a mountain of the same product, but it is big enough that you can actually plan around it for a few weeks or even a couple of months depending on your usage. For a regular consumer, a [cannabis flower 112g](#) bundle can cover a solid stretch without needing to reorder. For someone who uses cannabis medicinally or as part of a daily routine, it removes the anxiety of running low.

The other factor is cost efficiency. Buying at this scale usually brings the price per gram down noticeably compared to single-eighth or quarter purchases. But the real value is not just in the savings. It is in the ability to mix and match across different brands and profiles. A good retailer will let you build a bundle that includes several distinct offerings, so you are not locked into one flavour profile for the entire batch.

What a Well-Balanced Bundle Looks Like

If you are putting together your own 112g selection, I would recommend thinking about it in terms of variety and purpose. You want a mix of strains that cover different times of day and different effects. For example, you might include something bright and citrus-forward like **Sunny D lime** for daytime creativity, alongside a more balanced hybrid from **Broken Coast** for afternoon productivity. Then add a heavy indica from **Simply Bare** or **Royal City** for evenings when you want to wind down. Throw in a sativa from **Tantalus Labs** for weekends, and you have a rotation that never gets boring.

I have also found that including a couple of legacy producers like **San Rafael '71** or **Pedanium** can round out the flavour spectrum nicely. Their growing methods and curing processes bring

something different to the table. **Pure Sunfarms** and **BC Green** offer reliable staples that are consistent batch after batch. **Bandwagon** and **Muskoka Grown** have been putting out some impressive runs lately, especially in the citrus and pine categories. **Ogen** and **Edison Cannabis** are solid picks if you want something with a bit more punch in the terpene department. And if you come across something from **Flowr** or **North Star**, those are usually worth grabbing for their attention to detail in the grow.

Storage and Freshness Matter More Than You Think

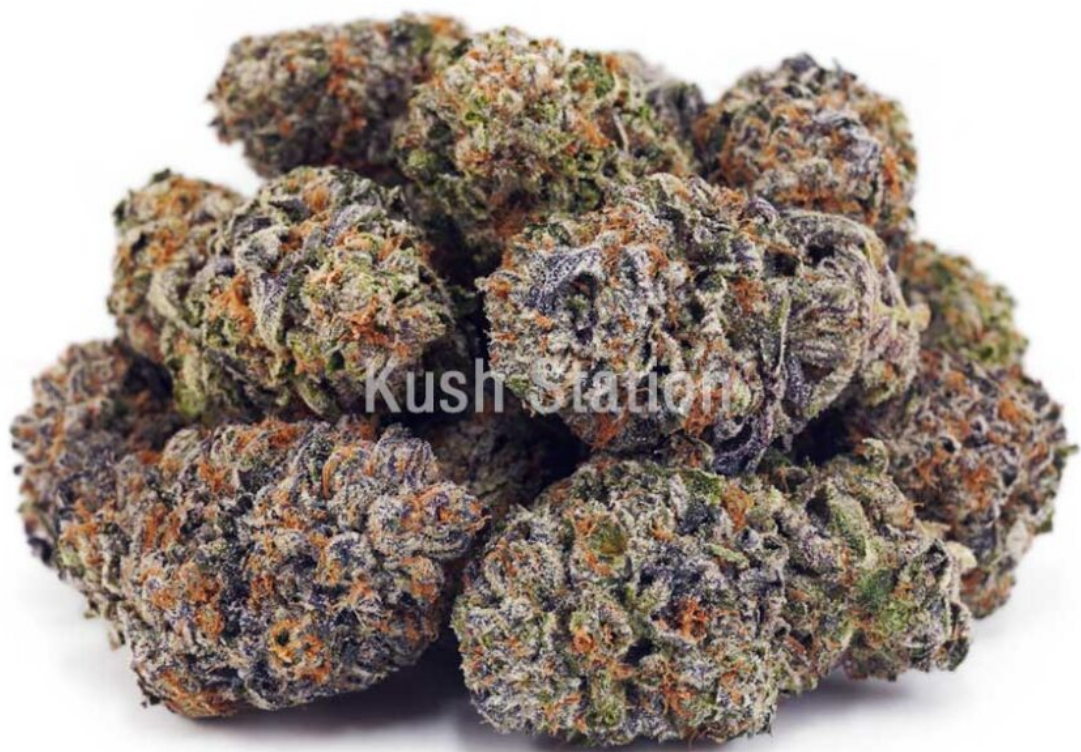

One concern people often raise about buying larger amounts of flower is that it will dry out or lose potency before they get through it. That is a real risk if you do not store it correctly. But with a little care, you can keep a 112g supply tasting and hitting well for weeks. The key is to break the flower down into smaller jars or bags as soon as you get it. Keep the majority in a cool, dark place with a humidity pack, and only pull out what you need for the next few days.

I have personally kept flower from **Pemberton** and **Kelowna** producers fresh for over two months using this method. The terpenes stay vibrant, and the moisture level stays right where it should be. The same goes for any **hash** or **prerolls** you might add to the order. They benefit from the same kind of care. If you are going to invest in a cannabis flower 112g bundle, invest a little extra time in how you store it. Your taste buds will thank you.

Mixing in Concentrates and Prerolls

Another approach I have seen work well is to use part of the 112g allocation for flower and part for other products. Some retailers let you build a mixed bundle that includes a few grams of **hash** or a pack of **prerolls** alongside the bulk flower. This gives you even more flexibility. You might keep the flower for your vaporizer or joint rolling, and use the hash for a different kind of session. The **prerolls** are handy for when you are on the go or just do not feel like rolling.

I have done this myself with a recent order that included flower from **Broken Coast** and a couple of hash coins from **Simply Bare**. The combination worked beautifully. The hash added a different texture and a slower burn, while the flower gave me the daytime versatility I needed. It felt like getting two experiences out of one purchase.

Terpenes and What They Tell You About Quality

Whenever I evaluate a flower bundle, I pay close attention to the terpene profiles. **Terpenes** are the aromatic compounds that give each strain its distinctive smell and flavour. They also influence the effects to some degree. A good bundle should offer a range of terpene expressions. You want some that are high in myrcene for that sedative, earthy quality, and others that are rich in limonene for a bright, uplifting citrus note. **Sunny D lime** is a perfect example of a limonene-dominant strain that cuts through the heaviness of a relaxing evening smoke.

I have noticed that producers like **Tantalus Labs** and **Royal City** tend to put a lot of care into preserving these volatile compounds. Their flower often has a more pronounced aroma and a

longer shelf life in terms of flavour. That is the kind of quality you want when you are buying in the 112g range. You are committing to that flower for a while, so it might as well be enjoyable from the first puff to the last.

Practical Tips for Your First 112g Order

If you are new to buying at this scale, here are a few things I have learned that might help:

- Start with a mix of four to six different strains. That gives you enough variety to rotate without overwhelming your storage setup.
- Ask about the harvest and packaging dates. Fresher flower will have better terpene retention and a more satisfying moisture level.
- Consider including at least one strain from a smaller craft producer like **Muskoka Grown** or **BC Green**. They often have unique genetics you won't find in the big commercial lines.
- Keep a humidity pack in every jar. A 62% pack works well for most storage scenarios.
- Don't be afraid to ask the retailer for recommendations based on your preferred flavour or effect. A good shop will know their stock and can point you to the best current batches.

Following these steps has made my experience with larger orders much more consistent. I used to end up with a lot of flower that felt samey after a week. Now I look forward to each jar because it brings something different to the rotation.

Why This Approach Works for Regular Users

For anyone who uses cannabis regularly, whether for medical reasons or simply as part of their lifestyle, having a reliable supply of quality flower is important. A cannabis flower 112g purchase removes the friction of frequent reordering and gives you the freedom to choose based on what you actually want to smoke, not just what is available at the moment. It also lets you explore more brands without committing to a full ounce of something you might not love.

MIX FLOWER

— Mix & Match 14g —

4 x 3.5 Grams

I have watched friends go from buying eighths every few days to settling into a rhythm with a 112g bundle, and almost all of them say the same thing. They feel more in control of their experience. They spend less time shopping and more time enjoying. And because they are buying from a curated selection, they end up trying strains they would have overlooked in smaller increments.

The cannabis market has matured to a point where buying in bulk no longer means compromising on quality. With the right approach and a bit of planning, a well-chosen bundle can elevate your entire relationship with the plant. Whether you are after the bright citrus of **Sunny D lime**, the steady reliability of **Pure Sunfarms**, or the craft touch of **Pedanios**, the 112g format gives you room to explore without the waste.
